

RDA-25 Recyclen

RDA type products are supporting elements suitable for the edging of supersructures with typically deeper media depth, in connection with limited load bearing capacities.

#160301

Manual

■ Green up the roof!

Application:

RDA edge pieces can be a flexible design tool in an intensive roof garden separating terraces and vegetated areas. The units can be create not just straight lines, but curves, custom made corners, and special angles too. In addition these units can be used covered by different furrings, or it can be coated or even painted. The internal conduits offer trunking for electrical cabling, plumbing.

Installation instructions:

To secure the continuity of water drainage, a level and compacted base made up of mineral rubble is made on a heavy duty DIADRAIN layer on to which the RDA kerb is then placed. Preformed corner are available. For stability metal capping profiles are slipped on to the top of the kerb. This also allows continuous jointing of the pieces.

Installation Tools:

General garden-building tools
Screwdriver
